

The prior model got the direction right and the size wrong

Elasticity of the agentic miss ratio (miss at 12 req/s over miss at 36 req/s) at three working-set sizes: observed, prior prediction, and a post-hoc recomputation of the same model.

Source: Undertow testbed, mean of 5 runs; prior prediction of 21 Sep 2026, written before the first results at scopes 0.06 and 0.20 were available, not independently timestamped.
