

# What an extra agentic request costs the origin depends on its working set

Origin requests caused by each added agentic request, at three working-set sizes. Traffic volumes, cache and corpus are held fixed; only the working set changes.

Source: Undertow testbed, mean of 5 runs per row, whiskers  $\pm 1$  SE; agentic load raised from 12 to 36 req/s. Real agents: theslowshef.org honeypot, p90 of distinct objects per 143 s window, 12 Aug – 21 Sep 2026.
