

Past 12 req/s, the largest term is the agentic requests already present becoming cheaper

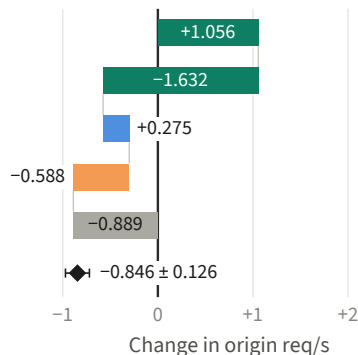

Change in origin requests per second, split by the class that causes it, for two steps of agentic load at the smallest working set. Terms add up to the measured change.

a 0 → 12 agentic req/s

New agentic requests
Agentic already present
Human class
Exhaustive class
Sum of terms
Measured

b 12 → 36 agentic req/s

Net change from 0 to 36 agentic req/s: $+0.392 \pm 0.158$ origin req/s

Source: Undertow testbed, separated working sets, scope 0.02; measured change: mean of 5 runs, whisker ± 1 SE.
