

Blocking the agentic class as well costs 2,807 served requests and buys no measurable latency

Requests served and human p99 latency under eight admission policies at the knee of the testbed (185 req/s). Blocking and deferring trace a single convex frontier.

Human p99 latency, ms

Source: Undertow testbed, 620 s windows, mean of 3 runs per policy, whiskers ± 1 SE.

B versus C: 95% confidence interval of the latency difference -1.99 to +2.05 ms.
