

A larger agentic share moves the agentic class's cost fourfold, the other classes' by 2–3%

(a) Miss ratio of each class as the agentic share of load rises from 13% to 30%. (b) Marginal origin cost of the exhaustive class as its own volume rises.

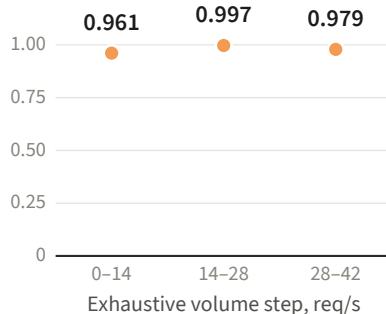

a Agentic share, 13% → 30%

Miss ratio, log scale

b Exhaustive volume, 0 → 42 req/s

Origin requests per added request

Secondary series: shared mapping, 1,211 s window, 3 runs

Source: Undertow testbed. (a) separated working sets, mean of 5 runs. (b) secondary series of 16 Sep 2026: shared mapping, 1,211 s window, mean of 3 runs, whiskers ± 1 SE.
