

Human latency rises with the agentic working set while the human hit ratio barely moves

Human p99 latency, human cache hit ratio and origin load at 30% agentic share, for three agentic working-set sizes. Volumes and cache are held fixed.

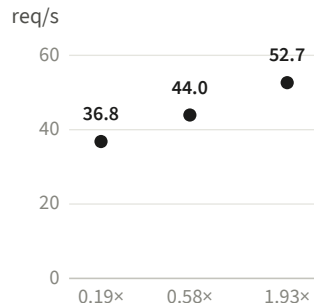

a Human p99 latency

b Human hit ratio

c Origin load

Agentic working set / cache capacity (log scale)

Source: Undertow testbed, mean of 5 runs per point, whiskers ± 1 SE.
